SKILLS

Technologies: NextJs, NodeJs, Express, MongoDB, Mongoose, MySQL, Sequelize, React, Redux, Socket-io, SpringBoot.

Tools & Concepts: Git, Docker, Jenkins, Firebase, Stripe, JWT and OOP, REST, SDLC, MVC, SOLID, CI/CD, CRUD.

Languages: JavaScript, Python, Java, Typescript, C++, C and SQL.

WORK EXPERIENCE

NextCTL

Banasree, Dhaka

Full Stack Web Developer (Full-time)

May 2024 – Nov 2024

- Built a scalable CMS with Next.js, Express.js, MySQL, and Sequelize ORM, ensuring robustness and resilience.
- Optimized database models for CRUD operations for performance, efficiency, maintainability and reliability.
- Improved application performance and SEO using SSR, SSG, image optimization, and lazy loading

Pravabati Digital Services

Remote - Pune, India

Web Development Intern (Part-time)

April 2023 – June 2023

- Learned crucial terms and methodologies to follow while developing production grade softwares.
- Collaborating with teams from different departments developed my management and communication skills.

PROJECTS

ZEXT-SEC - End-to-End Encrypted (E2E) Realtime Chatting Application

[Live Demo](#) [git-repo-client](#) [git-repo-server](#)

- An End-to-End encrypted real-time chatting application, built with Socket-io, React, Redux, Express.js and MongoDB.
- Diffie Hellman is used to exchange AES secret keys, which are then used to encrypt the messages. The keys are generated on per-conversation basis. The private keys are stored encrypted in the database for multi-device support.
- For offline users handling pre-shared public keys are stored on the database when each user logs in to the app.
- Secure authentication is implemented with JWT and image uploading on registration is handled with Multer.

GadgetGeek - An Ecommerce Website

[Live Demo](#) [git-repo-client](#) [git-repo-server](#)

- A Full-Stack e-commerce web application project with React, Redux, Node.js (Express.js) and MongoDB (Mongoose).
- Firebase authentication with email & password and OAuth, and payment option with Stripe Payment Gateway.
- Created an administrative dashboard with protected routes, for flexible contents, users and orders management.

SEU-REG - A University Course Management System for Faculties.

[Live Demo](#) [git-repo-client](#) [git-repo-server](#)

- A single page web app for university course management for the faculties, built with SpringBoot on backend and React on frontend, along with Tailwind CSS for styling and used simple JWT based authentication for security concern.
- Implemented MongoDB database indexing and aggregated search functionality and CRUD operations.

EDUCATION

SOUTHEAST UNIVERSITY

Tejgaon, Dhaka

BSc in Computer Science and Engineering - **CGPA: 3.80/4.00**

2022-2025

Relevant Coursework: Object Oriented Programming with Java, Databases, Data Structures, Advanced Algorithms, Operating Systems, Computer Networks, Cryptography and Network Security, Data Mining, Artificial Intelligence.

CERTIFICATIONS

- **The Complete Web Development Bootcamp from Udemy** - Learned React, Node.js, Express.js, and MongoDB.
- **Cisco Linux Essentials** - 24 labs on Linux System Administrations including user management, permissions etc.
- **Cisco Introduction to Cybersecurity** - Foundational knowledge about cybersecurity and information security.
- **Cisco Linux Unhatched** - Fundamental knowledge on linux kernel and the working procedure linux based systems.

EXTRACURRICULAR ACTIVITIES & OTHER SKILLS

- Participated in several intra university competitive programming contests, also I regularly solve problems on Leetcode.
- Became Champion in Intra Debating Competition arranged by Debate Club of the Southeast University.
- Worked with developing AI integrated security solution for Software Defined Networks (SDN) for research works.
- Developed custom CNN based models with Pytorch and worked with training Transformer based LLMs.
